Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 108 day(s). If the issue fee is paid on the date that is three months after t mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a ha months) after the mailing date of this notice, the Patent Term Adjustment will be 108 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date th determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retriev (PAIR) system (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office Patent Legal Administration at (703) 305-1383. Questions relating to issue and publication fee payments should directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

Listing of Claims

1. (Previously Presented) A predistortion circuit comprising:

an input terminal for inputting a predetermined signal;

a nonlinear device directly or indirectly connected to said input terminal;

a bias supply circuit for applying a voltage to said nonlinear device;

specific-frequency suppressing means connected to one side or both sides of said nonlinear device directly without another intervening device, said specific-frequency suppressing means suppressing all or part of such frequencies that are from a frequency corresponding to DC to a frequency corresponding to an occupied band width of an input signal inputted to said input terminal; and

an output terminal for outputting a signal.

- 2. (Currently Amended) A predistortion circuit of Claim 1 or 15, wherein said specific-frequency suppressing means has such impedance that the impedance of said specific-frequency suppressing means viewed from the connection point to which said specific-frequency suppressing means is connected is lower than the impedance of said nonlinear device viewed from said connection point at all or part of such frequencies that are from said frequency corresponding to DC to said frequency corresponding to said occupied band width and/or at least one higher harmonic frequency of a carrier wave of said input signal.
- 3. (Previously Presented) A predistortion circuit of Claim 1 or 15, wherein said nonlinear device is provided between the connection point between said input terminal and said output terminal and the ground.

4. (Withdrawn)

2-12-04 2-13-5 2-12-64 5. (Withdrawn)

- 6. (Previously Presented) A predistortion circuit of Claim 1 or 15, wherein said specific-frequency suppressing means comprises the all or part of a resistor, a coil, a capacitor, and a transmission line.
- 7. (Previously Presented) A predistortion circuit of Claim 1 or 15, wherein said nonlinear device comprises a diode.

2 12-04 MBS

8. (Withdrawn)

- 9. (Previously Presented) A power amplifier comprising: a predistortion circuit of Claim 1 or 15; and an amplifier for amplifying the signal from said predistortion circuit.
- 10. (Previously Presented) A power amplifier of Claim 9, wherein said amplifier comprises:

an input terminal for inputting a signal;

- a first matching circuit connected to said input terminal;
- a transistor the gate of which is connected to said first matching circuit;
- a second matching circuit connected to the drain of said transistor;
- an output terminal connected to said second matching circuit and for outputting a signal;
- a first bias circuit connected between said first matching circuit and said transistor;
- a second bias circuit connected between said second matching circuit and said transistor; and

specific-frequency suppressing means connected to one side or both sides of said transistor directly without another intervening device, said specific-frequency
